

**Just
ask
us...**

We know how

Metal and technics are important in the far-reaching industrial development. When combined, they are a powerful tool for man, enabling spectacular achievements. These two strong pillars have been the solid base for the current service Matecs is offering and has been offering for over forty years.

Complex matters

Metal and technics hold no secrets for Matecs. The company is both producer and supplier of competent overall solutions, varying from engineering, construction, machining, assembly and repair to complete purchase support. This wide service, the professional knowledge and the many years of experience allow the company to call itself a prominent contact point within the metal-processing industry. Beside this, Matecs has specialized in the precision machining of metal and is gladly challenged by the complexity and/or the size of the requested end product. In this field in particular, Matecs is able to practice its know-how and capacities that distinguish it from others to the fullest.

Different sectors

The varying metaltechnical products of Matecs are delivered to a broad range of (inter-)national customers in several industries. It is this diversity in production, the flexibility and availability of knowledge that define Matecs as your partner. Matecs concentrates on the needs of her customers and think with you in case of technical problems. Regular clients fully trust the problem solving power of Matecs and therefore often hand over the whole project. Not only because Matecs knows how to do it, but also because nearly all metal technical disciplines are available at the same location.

**Yes
we
can**

Yes I can and Yes I will isn't the same, but it is for Matecs. We invest a lot in "we can". We can provide knowledge and skills, men and machines, but we are also willing to find a solution, no matter how difficult your question is. Quality and service for every technical problem.

Experts in machining

We are the one you need for standard machining jobs, such as welding, boring, milling, cutting and turning. But we also do construction, repair and service. From engineering, drawing, measuring, manufacturing, assembly, stock keeping to logistics: we can do it all from A to Z. We have the right tools and the right people: our well-equipped machinery complies with the latest technical standards and our experienced staff members are well-trained.

Capacity, precision and quality control

For the precision machining of large and complex pieces of work, Matecs has about 6000 square meters of shopfloor at its disposal, various cranes and a number of machining centers. Thus supplying machining capacity and the technical facilities to deliver precise made-to-measure goods, no matter what the sizes or specifications are.

When required additional quality controls are executed and measurement reports are supplied. Quality is supervised on an on-going basis and can be verified by certifying bodies such as Bureau Veritas, DNV, ABS and Lloyd's Register when needed.

Sure we do

Service is not just the manufacturing and supply of a finished product. We think service is all about the work of man. Our staff lives up to their promise and guarantee good quality and reliable serve. Their passion for the job, flexibility and drive are the reason Matecs does well.

More than production

We stand for professional service. Our innovative organisation is ready to be at your service and to think along with its customers. Matecs is seen as an experienced and valuable partner in the development and production of tailor-made solutions. Our clients use the solid advice we can give, and the service when it comes to measuring, drawing and engineering. Also our service in the field of repairs and overhauls is often used.

Matecs has been developing several wear resistant solutions where the combination of metal and polyurethane can extend the life span or decrease the down time of an installation, thus saving a lot of money in various industries.

Ready and aiming for the future

Matecs knows the importance of continuation in management. Therefore we have invested a lot in the last years in the expansion and innovation of our machinery, but also in the system for resource planning, thus offering our clients several advantages. But we are not forgetting the importance of the human factor: our skilled staff is given further training on a regular basis and we closely cooperate with regional training institutes, offering trainee posts, so that young metal workers can practice.

Matecs plans ahead: we are open-minded towards new ways of solving problems and new ways of innovating, always in a socially responsible way.

Feel free to ask...

Having a technical/metal problem? We think with you, offer solutions and are gladly challenged, so feel free to ask! Call, e-mail us or make an appointment!
