

BEARING BLOCKS

Matecs designs and builds extra strong bearing blocks.

Our construction – available in various sizes – contains a reinforced foundation that minimizes vibrations and results in a longer service life.

Depending on the load, the shafts of the bearing blocks can be produced in any alloy you require and may be used for both in-board and submerged applications.

An optional cooling or lubrication system is available.

In addition to the building of new bearing blocks, we can also repair, refurbish or maintain your existing bearing blocks.

Custom built bearing blocks are our specialty.

SPECIFICATIONS

- ⚙ Shaft diameters range from 160 to 560 mm
- ⚙ Pumpshaft materials from C35N up to 34CrNiMo6
