

# NOZZLES

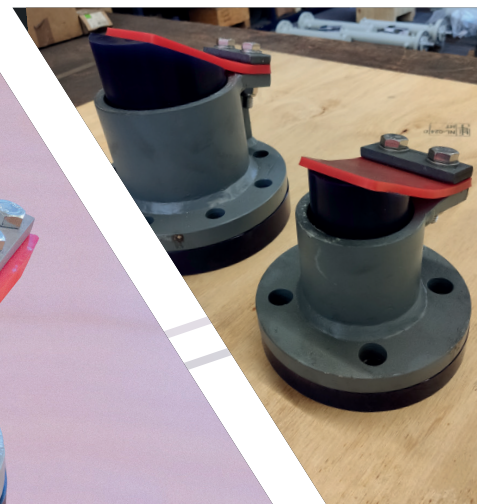

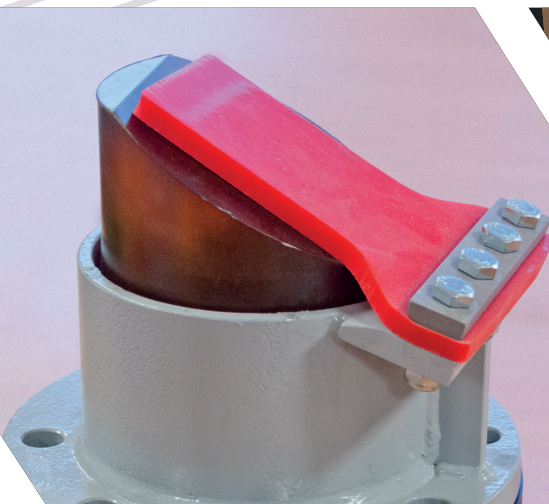

Nozzles are used in the hopper and in the draghead and are prone to wear. In collaboration with our specialized partner in the field of polyurethane applications, we have developed various types, based on customer experience.

The nozzles may have shut-off flaps, are wear-resistant, easy to fit, lightweight and they can be replaced easily.

The shut-off flaps can be replaced separately, thus reducing costs and material waste.

Due to the design of our special polyurethane inserts, we prevent the wearing of (metal) casings, so only part of the nozzle needs to be replaced. Besides our standard range we can also offer custom-made nozzles.

## SPECIFICATIONS

- Available in polyurethane, steel and hard white cast iron
- Available for delivery in parts

- Standard or custom-made
- Execution with cap or flap
