

SHORE VALVES

These valves are used on shore. They are robust enough for rough handling and they are easy to transport. The shore valves enable the closing of the discharge pipes while maintaining pre-designed pressure.

For specific diameters, hydraulic cylinders will be installed on the side, to reduce the height of the complete installation.

The entire production of our dredge valves, from design to finished product, takes place at our own facility.

All different types are engineered using FEM strength calculations. Customized executions (i.e. reduced height, side-mounted cylinders) are our specialty.

SPECIFICATIONS

- Inner diameters range from 150 to 1400 mm
- Pressures of up to 60 bar

- Manually, electrically or hydraulically operated
- Available with hydraulic power unit
