

FORGED PRODUCTS

Matecs supplies forged products for the dredging, shipbuilding, petrochemical and food industries. Our range includes forged products such as machine shafts for an enormously varied range of applications.

Depending on the customer's wishes and the final load of the material in its application, we supply products of both high and low alloys of forged steel. Advice with regard to the product to be supplied is based on our experience, as well as on our reliable and broad network of notable European suppliers, each with their own expertise and specialities.

Additionally, we offer any required chemical and mechanical testing, inspection and certification, in which we work closely together with independent notified bodies.

SPECIFICATIONS

- Materials include plain carbon and CrNi alloys
- Products such as shafts, rings, pivots and rudder stocks
- Products up to 25 tons available
- Inspection/certification by notified body upon request
