

PIPE ROLLERS

Pipe Rollers have proven to be indispensable in guiding a pipe or cable under heavy conditions. However, our own wear-resistant pipe roller can be of use for many other applications as we offer, besides our standard design, the production of pipe rollers in other dimensions.

In cooperation with our specialized partner in polyurethane, Matecs offers a complete lightweight guide roller made of metal, that is both strong and due to its coated surface guaranteed a longer lifespan.

The welding and assembly of the pipe rollers all happens on our own premises in Roosendaal. After the constructional work, the pipe rollers are machined and the inner construction is mounted. After the polyurethane layer is applied, the bearings and any shafts are mounted, making them ready for use.

SPECIFICATIONS

- Available in various diameters
- Steel, stainless steel or aluminium core
- Polyurethane tread in various hardnesses
- Various chemical resistances possible
